

Maduradian^{1%}

10 mg/kg maduramicin ammonium

Benefits

- High Potency Active
- Broad Spectrum Control
- High Compatibility
- Increased Growth Rate
- Improved Feed Efficiency
- Reduced Mortality

Usage

- 500 gm / ton of feed (5ppm)
or as directed by
Nutritionists

Maduradian^{1%}, the active ingredient in Maduradian^{1%}, is a highly effective, monovalent, monoglycoside polyether ionophore anticoccidial. It exerts both anticoccidial and antibacterial effects. Maduradian^{1%} induces an anticoccidial effect on the asexual forms of Eimeria by interfering with the passage of ions across the cell membrane. It also provides indirect protection against necrotic enteritis by preventing clinical coccidiosis from acting as a predisposing factor.

Withdrawal Period :

- Meat : 5 days

Presentation : 25 KG Bag
