

COMPOSITION

Each gm of Vitamin D₃ contains :
60,000 IU of cholecalciferol (Vit. D₃)

Vitamin D₃ regulates Calcium and Phosphorus metabolism, promotes absorption of Calcium and Phosphorus from Intestine, regulates their renal excretion and incorporation into skeleton.

- Stabilizes egg-shell quality.
- Improves calcium absorption from intestine.

USAGE

Mix Vitamin D₃ @ of 20-30 g/ton of feed.

Mixing Instructions :

Prepare a premix by adding 20-30 gm of Vitamin D₃ in 5 kg feed. The premix is then to be mixed in the final quantity of feed.
